

AGENTFORCE ACTIVATION WORKSHOPS (AGT505)

Agentforce Observability Activation Workshop

Exercise Guide — Updated against live org (SP26v1 base). Changes highlighted.

Change log (highlighted vs SP26v1 EG)

How to read this PDF: Yellow highlights mark steps or labels corrected to match the AGT505 trial org UI captured during the run. Screenshots below are new org captures (not the Netlify mock app).

1. **Observe & Optimize nav:** Analytics, Sessions & Intents, Alerts (no Scorers item; no separate Optimization → Insights nav item).
2. **Analytics top tabs:** Overview and Performance Insights (not separate Agent Effectiveness / Quality top tabs).
Effectiveness/Usage/Quality/Health/Trust/Voice/**Custom Scorers** are category pills under Overview.
3. **Abandon Rate** (EG said Abandonment Rate).
4. **Sessions:** Processed may show "Processing latest sessions..."; use **Unprocessed Sessions** for immediate post-test rows. Columns include Initial Agent Responses, Subagents, Actions.

Exercise 2: Interact with an Agent

Task 1 — Create agent from script

1. App Launcher → Agentforce Studio → Agents.
2. New Agent menu → **New from Script**.
3. Paste script from `sforce.co/ProntoAgent` → Create Agent.
4. Preview → Select User → **EinsteinServiceAgent User** → Save.

Task 2 — Test and activate

1. Preview in Live Test Mode. Reset between turns.
2. Utterances: fusion bites restaurant; speak to an agent; help with info about a store.
3. Save → Commit Version → Activate → exit Builder.

Exercise 3: Experience Agentforce Observability

Task 1 — Analytics (Service Agent)

1. Agentforce Studio → Analytics. Agent Type = Service Agent.
2. Filter bar: Agent, Timeframe, Channel, Modality (count these four).
3. Explore Overview → Agent Performance / Aggregated Effectiveness Metrics (Success, Engagement, Abandon, Escalation, Deflection).
4. Explore category pills including Custom Scorers (may show Task Resolution / Einstein Feedback disabled).
5. Open Performance Insights for breakdowns (replaces EG "Agent Effectiveness" top-tab framing).

Org screenshot — Analytics Overview:

Task 2 — Insights (via Sessions / Performance Insights)

SP26v1 EG said Optimization → Insights. In this org, use Analytics → Performance Insights and the Sessions processing banner instead of a separate Insights page.

Task 3 — Sessions & Intents

1. Select Sessions & Intents.
2. Processed Sessions may be empty / processing; open Unprocessed Sessions to see test traffic.
3. Open a Session ID for the chat/trace detail when available.
